

ATISHAY JAIN

Software Engineering | Full-Stack Development | Applied AI

Ludhiana, Punjab, India | +91 9646009828 | ajain8_be23@thapar.edu | LinkedIn | GitHub | Portfolio

SUMMARY

Computer Engineering student with hands-on experience building production-oriented full-stack and AI systems using Python, FastAPI, React/Next.js, TypeScript, PostgreSQL, Docker, and modern LLM tooling. Built real-time web applications, secure backend workflows, offline AI pipelines, and CI/CD deployments, with a focus on reliability, performance, and iterative engineering.

EXPERIENCE

Def-Space Summer Intern - Bharat Space Education Research Centre (BSERC)	Jun 2026 - Aug 2026
Def-Space Summer Internship Programme 2026 6+ weeks	
Completed a structured Def-Space internship focused on defence-space innovation and responsible technology.	
Finance & Documentation Manager - TEDxTIET	
Patiala, Punjab, India	Aug 2025 - Feb 2026
Managed an INR 3.5 lakh event budget with structured allocation, real-time expense tracking, variance analysis, and sponsor documentation, improving financial visibility and operational control across teams.	

PROJECTS

ReceiptSplit - UPI-Native Bill Coordination Platform	2026
Next.js, TypeScript, FastAPI, PostgreSQL/Supabase, Docker	
- Built bill coordination with receipt OCR, editable items, mixed splits, real-time state, and deterministic rounding. - Added auth, creator controls, settlement states, audit logging, UPI intents, and mobile-first failure-state UX. - Hardened permissions, status transitions, participant removal, and auditable dispute flows.	
TIET-LOOP - Campus Event Platform	2025 - 2026
React, Vite, Tailwind CSS, FastAPI, WebSockets, Google Maps	
- Built a campus PWA for events, RSVPs, chat, friendships, carpools, admin CRUD, and venue navigation. - Added REST/WebSocket flows, persistent storage, JWT auth, recommendations, and Google Maps. - Supported mobile-first access and event-management workflows for organizers.	
Hybrid GenAI Transaction Categorizer	2025 - 2026
Python, FastAPI, React, ONNX Runtime, Qwen2.5-7B GGUF, SQLite	
- Built an offline classifier combining merchant rules, ONNX DistilBERT, and local Qwen fallback. - Added feedback learning and React/FastAPI surfaces for human-readable predictions. - Tuned local CPU inference from roughly 60-80s to 5-13s through prompt/context tuning.	
Mahoraga - Adaptive RL Environment	2026
Python, Gymnasium, FastAPI, Gradio, Qwen 2.5, LoRA	
- Developed an adaptive RL environment with curriculum pressure and reward shaping. - Structured reward signals around survival, combat, adaptation, and anti-cowardice behavior. - Integrated Gymnasium, FastAPI/Gradio, and optional Qwen 2.5/LoRA paths for adaptive agent behavior.	

SKILLS

Languages: Python, C++, C, SQL, JavaScript/TypeScript, R
Full-Stack: React, Next.js, Vite, Tailwind CSS, FastAPI, Flask, Django, REST APIs, WebSockets
Data & Infra: PostgreSQL, Supabase, SQLite, MongoDB, Docker, Git, GitHub Actions, Linux, CI/CD
AI/ML: Transformers, ONNX Runtime, local LLMs, RAG, embeddings, Pandas, NumPy

EDUCATION & CERTIFICATIONS

B.Tech, Computer Engineering - Thapar Institute of Engineering and Technology	Aug 2023 - Jun 2027
CGPA: 8 Patiala, Punjab, India	
Class XII (Science) - Sacred Heart Senior Secondary School, Ludhiana 94.2%	
Certifications: NVIDIA Foundations of Deep Learning; Duke University - Introduction to RAG; CI/CD Pipeline with Docker; Software Development fundamentals.	

ACHIEVEMENT

Meta OpenEnv Hackathon 2026 Finalist - built Mahoraga, a self-improvement RL environment using Qwen2.5 and LoRA.
